

Name : _____

Equivalent Fractions on Number Line Worksheet

Use the number line to find the equivalent fractions.

Solved Example: $\frac{1}{3} = \frac{2}{6}$

- ① Find the equivalent fraction of $\frac{2}{4}$ and show it on the second number line.

$\frac{2}{4} = \frac{\square}{\square}$

- ② Using the given number lines, find and show the equivalent fraction of $\frac{4}{8}$.

$\frac{4}{8} = \frac{\square}{\square}$

- ③ Using the given number lines, find and show the equivalent fraction of $\frac{3}{6}$.

$\frac{3}{6} = \frac{\square}{\square}$

Equivalent Fractions on Number Line Worksheet

Answers

Solved Example: $\frac{1}{3} = \frac{2}{6}$

- ① Find the equivalent fraction of $\frac{2}{4}$ and show it on the second number line.

$\frac{2}{4} = \frac{\boxed{4}}{\boxed{8}}$

- ② Using the given number lines, find and show the equivalent fraction of $\frac{4}{8}$.

$\frac{4}{8} = \frac{\boxed{2}}{\boxed{4}}$

- ③ Using the given number lines, find and show the equivalent fraction of $\frac{3}{6}$.

$\frac{3}{6} = \frac{\boxed{1}}{\boxed{2}}$
