## Equivalent Fractions on Number Line Worksheet

Use the number line to find the equivalent fractions.

Solved Example:  $\frac{1}{3} = \frac{2}{6}$

- ① Find the equivalent fraction of  $\frac{2}{4}$  and show it on the second number line.

$\frac{2}{4} = \frac{\square}{\square}$

- ② Using the given number lines, find and show the equivalent fraction of  $\frac{4}{8}$ .

$\frac{4}{8} = \frac{\square}{\square}$

- ③ Using the given number lines, find and show the equivalent fraction of  $\frac{3}{6}$ .

$\frac{3}{6} = \frac{\square}{\square}$
