Solving Systems of Equations by Elimination Method

Use elimination to solve each system of equations.

1 $x - y = 2$
 $x + y = -3$

2 $3x - 4y = 8$
 $5x + 4y = -24$

3 $4x + 2y = 0$
 $-4x - 9y = -28$

4 $5x + y = 9$
 $10x + 7y = -18$

5 $3x + 7y = 2$
 $10x + 5y = -30$

6 $-8x - 3y = -12$
 $2x + 3y = -6$

7 $3x - 2y = 2$
 $5x - 5y = 10$

8 $2x + 2y = 12$
 $3x - 2y = 12$
