

Name : _____

Adding and Subtracting

_____ Improper Fractions _____

Find the value in the lowest term.

[1] $\frac{23}{4} + \frac{19}{3}$

=

[2] $\frac{12}{5} - \frac{4}{3}$

=

[3] $\frac{23}{7} - \frac{14}{8}$

=

[4] $\frac{55}{4} + \frac{22}{6}$

=

[5] $\frac{44}{16} + \frac{78}{18}$

=

[6] $\frac{65}{5} - \frac{70}{10}$

=

[7] $\frac{88}{4} + \frac{20}{15}$

=

[8] $\frac{28}{6} - \frac{12}{5}$

=

[9] $\frac{33}{9} - \frac{19}{8}$

=

[10] $\frac{7}{5} + \frac{25}{10}$

=

[11] $\frac{17}{9} - \frac{2}{3}$

=

[12] $\frac{19}{3} - \frac{27}{6}$

=

_____ Improper Fractions _____

Answers

$$[1] \quad \frac{23}{4} + \frac{19}{3}$$

$$= \frac{145}{12}$$

$$[2] \quad \frac{12}{5} - \frac{4}{3}$$

$$= \frac{16}{15}$$

$$[3] \quad \frac{23}{7} - \frac{14}{8}$$

$$= \frac{43}{28}$$

$$[4] \quad \frac{55}{4} + \frac{22}{6}$$

$$= \frac{209}{12}$$

$$[5] \quad \frac{44}{16} + \frac{78}{18}$$

$$= \frac{85}{12}$$

$$[6] \quad \frac{65}{5} - \frac{70}{10}$$

$$= \frac{6}{1}$$

$$[7] \quad \frac{88}{4} + \frac{20}{15}$$

$$= \frac{70}{3}$$

$$[8] \quad \frac{28}{6} - \frac{12}{5}$$

$$= \frac{34}{15}$$

$$[9] \quad \frac{33}{9} - \frac{19}{8}$$

$$= \frac{31}{24}$$

$$[10] \quad \frac{7}{5} + \frac{25}{10}$$

$$= \frac{39}{10}$$

$$[11] \quad \frac{17}{9} - \frac{2}{3}$$

$$= \frac{11}{9}$$

$$[12] \quad \frac{19}{3} - \frac{27}{6}$$

$$= \frac{11}{6}$$
