Practice Order of Operation

Find the missing operator to make the expression true.

1. $(5 \times 4^3 \square 2^4) - [7 \times (17 - 13)] = -8$

2. $5 + \{[(6 \times 3 - 8) \square (4 - 7)] + 34\} = 9$

3. $[(25 - 15) \square (7 \times 4 + 13)] - 5 = -36$

4. $71 - \{2^3 + [3 \square (8^2 \div 64)]\} = 60$

5. $(5 \times 4^3 \square 2^4) - [7 \times (17 - 13)] = -8$

6. $[(15 \div 3) \square (-8)] + (-9 + 4) = -45$

Answers

1. $(5 \times 4^3 \boxed{\div} 2^4) - [7 \times (17 - 13)] = -8$

2. $5 + \{[(6 \times 3 - 8) \boxed{\times} (4 - 7)] + 34\} = 9$

3. $[(25 - 15) \boxed{-} (7 \times 4 + 13)] - 5 = -36$

4. $71 - \{2^3 + [3 \boxed{\times} (8^2 \div 64)]\} = 60$

5. $(5 \times 4^3 \boxed{\div} 2^4) - [7 \times (17 - 13)] = -8$

6. $[(15 \div 3) \boxed{\times} (-8)] + (-9 + 4) = -45$
